## DATE:

Per USDA Guideline #1120 a veterinary import permit will not be required.

1. The enclosed material is non-hazardous, non-infectious microbial samples for genetic sequencing which do not encode human, plant, avian, or livestock pathogens. The samples are diluted in ZYMO DNA/RNA shield to inactivate any pathogenic or cellular activity.
2. If the material contains recombinant products, they were produced by recombinant microbial expression (vector is NOT considered pathogenic for livestock or avian species) AND the organism does NOT contain genes or express antigens of livestock or poultry disease agents.
3. The material does not contain any animal derived additives. The end use of the material is DNA sequencing and will be used only in vitro. The material will not be used for food, drugs, or cosmetics, or to treat or diagnose humans or animals.

Harmonized Tariff Number: 3002.59.00

Tracking Number:

Thank you,  
James Stapleton

A handwritten signature in black ink, appearing to read "James Stapleton", is written below the printed name.
