

Per USDA guideline 1120

The enclosed material is non-hazardous, non-infectious, inactivated, laboratory yeast cell cultures which does not encode human, plant, avian, or livestock pathogens. The samples are diluted in water, Tris buffer, or DNA/RNA shield.

If the material contains recombinant products, they were produced by recombinant microbial expression (vector is NOT considered pathogenic for livestock or avian species) AND the organism does NOT contain genes or express antigens of livestock or poultry disease agents.

The material does not contain any animal derived additives. The end use of the material is DNA sequencing and will be used only in vitro. The material will not be used for food, drugs, or cosmetics, or to treat or diagnose humans or animals.
